The *Cotton Situation* is published in January, March, May, August, and October.

## SUMMARY

*Cotton plantings* may total about 11.9 million acres in 1971, including 102,700 acres of extra-long staple cotton, according to January planting intentions. This is slightly below 1970 plantings but 3 percent above the 1971 upland national base acreage allotment of 11½ million acres.

When the planting intentions survey was conducted, farmers did not have complete information on the new cotton program provisions. Final program provisions are expected to be announced in early February. Any changes in farmers' intentions will be reflected in the regular spring planting intentions report to be released March 16.

*The cotton carryover* next summer may decline to about 4½ million bales from the 5¾ million of last August. Although the 1970 cotton crop increased slightly to 10.2 million running bales, total use should moderately exceed the 10.8 million bales of 1969/70, reflecting improved export prospects.

*U.S. cotton exports* of at least 3½ million bales are likely this season, ¾ million above 1969/70. Small world stocks, record foreign consumption prospects, and the smallest foreign Free-World production in 4 years point to increased demand for U.S. cotton.

*Mill consumption of U.S. cotton* during 1970/71 may match or slightly exceed last year's 8 million bales. Although competition from man-made fibers appears to be moderating, the economy's sluggishness is limiting expansion in cotton use.

*The 1970 cotton crop* totaled 10.2 million running bales, 3 percent above the previous crop. Yields rose only slightly—to 441 pounds—as several areas experienced a second consecutive year of adverse growing and harvesting conditions.

*The Agricultural Act of 1970*, a 3-year program effective with the 1971/72 season, suspends marketing quotas and penalties for each of the 1971 through 1973 crops. Other major provisions of the program include: (1) a national average 1971 crop price support loan rate of 19.50 cents per pound (Middling 1-inch basis, micronaire 3.5 through 4.9), net weight basis at average location—down about 2 cents from the comparable 1970 level; (2) a guaranteed support price of 35 cents per pound or 65 percent of parity, whichever is higher, on production from the national base acreage allotment of 11.5 million acres—slightly above 1970 acreage for payment; (3) a price support payment of 35 cents less the market price, but in no event less than 15 cents per pound—compared with 16.80 cents in 1970 and a 30 percent payment bonus for small farms; (4) an annual payment limitation of \$55,000 to any producer; (5) a cropland set-aside requirement of not more than 20

percent of the farm base acreage allotment; and (6) an expanded cotton research and promotion program.

*Man-made fiber producing capacity*, which has increased sharply in recent years, is expected to expand further during 1971 and 1972. While the projected rate

of expansion has slowed, current capacity of about 7.2 billion pounds is expected to increase almost one-fifth by late 1972. Most of the increase will be devoted to non-cellulosic fibers. Rayon and acetate capacity may remain near the November 1970 level.

## OUTLOOK FOR 70/71

### DEMAND AND SUPPLY HIGHLIGHTS

Prospects for moderately larger disappearance and slightly larger production highlight the 1970/71 cotton outlook. Larger expected disappearance reflects improved export prospects due to dwindling supplies and expanding cotton use abroad. For the 1970 U.S. cotton crop, acreage planted was about the same but the average yield rose only slightly as several areas experienced a second consecutive year of adverse growing and harvesting conditions. First indications on the 1971 crop are for slightly smaller planting intentions.

#### Sharp Stock Reduction Likely

Combined mill use and exports may exceed production by 1 to 1½ million bales in 1970/71, meaning the cotton carryover this summer will be cut to

around 4½ million bales (figure 1). This would be the smallest since the summer of 1952 when less than 3 million bales were on hand. While crop prospects deteriorated further in recent months to a current estimate of 10.2 million running bales, expected disappearance has risen to at least 11½ million.

The small increase in the 1970 crop—262,000 bales—is more than offset by a ¾ million-bale decline in beginning stocks. So, the cotton supply is the smallest since 1947, totaling around 16 million bales or almost ½ million below 1969/70 (table 15).

#### Disappearance Prospects Improve

Expected cotton disappearance of 11½ million bales contrasts with last season's 10.8 million. While mill use may remain near the 1969/70 level of 8 million bales, exports are expected to increase sharply. Even though

Figure 1

U.S. supplies are reduced, foreign supplies are down even more and cotton use abroad is expected to increase slightly. Thus, U.S. exports may total at least 3½ million bales, up from the depressed 1969/70 level of 2¾ million (table 15).

## DOMESTIC MARKET OUTLOOK

### Cotton Crop Barely Exceeds 1969; Average Yield Estimated at 441 Pounds

The December 1 crop forecast of 10.2 million running bales represents a further deterioration in prospects for the 1970 crop. This is down more than 0.1 million bales from the month-earlier estimate and 0.8 million below August 1 indications. Although prospects faded in several areas, production still is expected to exceed 1969 as the result of 1 percent greater harvested acreage and 2 percent higher yields (figure 2).

The indicated national average yield per acre is 441 pounds, above last year's 434 pounds, but sharply below the 1964-68 average of 497 pounds (tables 1 and 16). Generally unfavorable growing and harvesting conditions in several areas caused the prospective U.S. yield to decline 6 percent from early-season expectations.

*Ginnings from the 1970 crop* are nearing completion after lagging earlier in the season because of the late crop

and unfavorable weather for mechanical harvesting. (Over 95 percent of the crop was harvested mechanically.) Ginnings from the 1970 crop totaled 10,056,193 running bales through mid-January.

The average staple length of ginnings to January 16 was 33.4 thirty-seconds inches, down slightly from last season's 33.6 and the record average length of 33.9 thirty-seconds inches for the same period of the 1968/69 season. About 65 percent of ginnings stapled 1⅛ inches and longer during this period, near the year-earlier level. This compares with 67 percent of the 1969 crop for the entire season (tables 2 and 17).

The average fiber strength of the 1970 crop is about the same as a year earlier. However, the grade index for 1970 crop ginnings during August-January 15, at 91.5 (Middling White equals 100), is above the 91.1 achieved last year. The average micronaire reading is down slightly.

*Commodity Credit Corporation loan stocks from the 1970 cotton crop* held against outstanding price support loans totaled about 1.9 million bales as of January 15, compared with .3 million a year earlier. Sales of CCC-owned cotton have amounted to about 1 million bales this season. About 2 million bales (including extra-long staple cotton) remain in inventory, a little below the year-earlier level (tables 3 and 18).

The drawdown will be reflected in CCC cotton stocks next August. CCC stocks are likely to fall at least a

<sup>1</sup> Preliminary.

Consumer and Marketing Service.

million bales from last summer's total of around 3 million.

An upland cotton "shortfall" of 961,000 bales was announced by USDA on December 30, 1970. This is the amount by which estimated upland cotton requirements

for domestic use and export will exceed production during the 1970/71 marketing year. It was based on estimated disappearance of 11.1 million bales and indicated production of 10,139,000 bales from the 1970 crop. USDA pledged to make available a quantity of cotton equal to the "shortfall" for unrestricted use at current market prices in a manner which would not unduly affect market prices. However, the "shortfall" is subject to revision if there are substantial changes in estimated requirements or production. From August through January 15, 909,679 bales of cotton were sold and applied to the "shortfall".

Farm prices for upland cotton during the first third of the 1970/71 season exceeded the year-earlier level by about 7 percent. To December 1, upland cotton prices averaged 22.4 cents per pound, compared with 20.94 cents during 1969/70. Although prices dipped in December to 20.96 cents, lowest of the season, they still were 1 cent above December 1969 (table 19). The preliminary value of the 1970 upland cotton crop is one-tenth greater than for the 1969 crop.

The support price for the 1970 crop of upland cotton (average of the crop) is 20.15 cents, almost ½ cent above the previous crop. Prices received by farmers do not include the direct price support payment on domestic allotments (65 percent of the farmer's final allotment) which was 16.80 cents this season. The 1969 payment was 14.73 cents per pound.

<sup>1</sup> Includes American Pima and Sea Island. <sup>2</sup> Excludes cotton sold September 9 to date for delivery in the 1970 marketing year.

<sup>3</sup> Includes American Pima cotton transferred to CCC from the national stockpile. <sup>4</sup> Less than 500 bales.

Agricultural Stabilization and Conservation Service.

*Average spot market prices* for most qualities have strengthened in recent weeks after declining slightly from early-season levels. Prices now are generally near or above year-earlier levels with shorter staples showing the biggest increases.

The average spot market price for Middling 1<sup>1</sup>/<sub>16</sub>-inch cotton was 24.55 cents per pound in December, down slightly from December 1969. For Middling 1<sup>5</sup>/<sub>16</sub>-inch cotton, the price in December averaged 21.06 cents, 0.57 cent above the year-earlier price (table 19).

#### Mill Use Estimated at 8 Million Bales as Competition Moderates

Use of cotton by U.S. mills during 1970/71 is estimated to match or slightly exceed last year's level of 8 million bales, which was about 1 million below the 1964-68 average. Cotton appears to be faring a little better this season in its competition with man-made fibers. Also, cotton textile imports have declined slightly in recent months, reducing the supply of competitive fabrics. But the prospect of further reduced military purchases of cotton textiles as well as the current slowdown in general economic activity may limit any gain in total cotton use.

*The daily rate of mill consumption* of cotton has increased slightly during recent months. The seasonally adjusted rate was 30,916 bales in December, slightly above the previous month and the year-earlier level (table 4). The ratio of inventories to unfilled orders for cotton cloth, normally a reliable short-term indicator of

future cotton use, dropped to a 3-year low in November as orders picked up (table 5). Although this does not yet suggest a significant upturn in the rate of use, inventories of cloth are low and a continued pickup in orders could be reflected rather quickly in mill use of cotton.

Mill use of cotton during recent months has held near the year-earlier level despite reduced supply levels for some of the shorter staples. For instance, the current supply of cotton stapling less than 1-inch is running about 15 percent of the total, near last year's low level (table 17). However, mills are apparently substituting longer stapled cotton rather than man-made fibers as was done in 1967/68. Mill use of shorter than 1-inch cotton declined to about 9 to 10 percent of total use during recent months, slightly below a year earlier; however, consumption of medium and most longer staples increased as percentages of total use (table 20).

*Competition from man-made fibers*, which have penetrated many of cotton's markets in recent years, appears to be moderating this year. There are indications that competitive losses to man-made fibers, which slowed last year, will be halted during 1970/71. For example, while use of cotton during August-December approximated the year-earlier total, cotton-equivalent consumption of man-made staple fiber on cotton-system spinning spindles was down over 7 percent. Rayon and acetate use was down 21 percent; non-cellulosic use was up less than 1 percent (table 6). In addition to increasing competition from cotton, greater textile imports probably have hurt man-made fiber use.

Another indication that cotton is at least holding its own in its battle with man-made fibers is its relatively

Based on data from American Textile Manufacturers Institute, Inc.

constant market share. For instance, during calendar 1970, cotton's share of the textile market likely remained near the previous year's 40 percent despite a small decline in total use. This marked the first year in a decade in which cotton's share did not decline significantly. However, per capita cotton use dropped about 4 percent in 1970 to 18.6 pounds. At the same time, man-made fiber consumption also declined slightly for the first time since 1960. As a result, estimated total fiber use dropped to 46.7 pounds per capita, 1.4 pounds below the year-earlier level (table 7).

Cotton still faces keen competition from fabric blends. The major blend is polyester and cotton, with cotton usually the minor fiber. In calendar 1970, production of polyester-cotton blends totaled about 2 billion linear yards, equivalent to about one-third of total cotton broadwoven goods production, up from 27 percent in 1969. Although a further increase is likely in 1971, the rate of growth may not match last year's rate.

One of the major polyester-cotton blends is bedsheeting. Increased use of blends in this market caused all-cotton use to decline about one-fourth between 1968 and 1969. However, cotton consumed in 100-percent cotton sheets increased 10 percent during the first half of 1970 compared with the year-earlier period.

A 1971 cotton research and promotion budget of \$10 million has been approved to help cotton compete more effectively with man-made fibers. This is slightly larger than the 1970 budget. Funds are collected from cotton producers under the auspices of the Cotton Research and Promotion Act of 1966. The budget for 1971 is about equally divided between research and promotion. In previous years, the ratio of expenditures was about two-thirds for promotion and one-third for research.

The 1971 program places major emphasis on cooperation with textile mills and manufacturers in coordinating market development and technical research activities. Cooperative advertising, product development and improvement, and research to cut farm production costs will also receive major emphasis.

The Agricultural Act of 1970 will provide additional funds for cotton research and promotion efforts. For each of the 1971, 1972, and 1973 crops, up to \$10 million is to be made available from government savings resulting from the reduction of payments to producers due to payment limitations. In addition, the Secretary of Agriculture has the discretion to make an additional \$10 million available for both the 1972 and 1973 crops.

Cotton textile imports, another competitor with U.S. mill use, have leveled off in recent years. During 1970, imports were equivalent to about 1 million bales of cotton, about 3 percent below a year earlier, but above

<sup>1</sup>In cotton-equivalent bales. <sup>2</sup>Numbers in parentheses indicate number of weeks in period. <sup>3</sup>Based on a cotton-equivalent factor of 1.10 for rayon and acetate and 1.37 for non-cellulosic. <sup>4</sup>Running bales. <sup>5</sup>Cotton equivalent of monthly consumption divided by 480. <sup>6</sup>Sum of monthly consumption not adjusted to August 1-July 31 marketing year basis. <sup>7</sup>Preliminary.

the 1964-68 average of 0.9 million. At the same time, U.S. cotton textile exports likely were equivalent to about 0.4 million bales, 12 percent below 1969, but near the 1964-68 average (tables 21 and 22).

*Man-made fiber textile imports* also affect cotton use by domestic mills. These imports have increased rapidly in recent years and now are running about 25 percent above the year-earlier level. Imports probably exceeded 300 million pounds in 1970, about quadruple the 1965 total (tables 23 and 24).

*Textile deliveries to U.S. military forces*, although a small proportion of total cotton use, are important to the cotton outlook. Cotton usually comprises a substantial percentage of total deliveries. On a raw fiber equivalent basis, cotton deliveries this crop year are running at an annual rate of less than 50,000 bales, about one-third the 1969/70 level, reflecting a general

textile fabric cutback from levels of recent years (tables 25, 26, and 27).

*The average mill margin* between the wholesale value of fabric produced from a pound of cotton and raw cotton prices has increased in recent months to the highest level since the series originated almost 5 years ago. In December, the margin averaged 44.29 cents per pound, about  $\frac{1}{3}$  cent above the previous month and December 1969.

Higher cloth values were primarily responsible for the recent rise in the mill margin, as the average price paid by mills for raw cotton changed little. Fabric prices averaged 69.84 cents in December, slightly above November and the highest since April 1966. Cotton prices remained around 25.50 cents during early 1970/71 (table 8).

### Extra-Long Staple Cotton Stocks Falling Sharply

Stocks of extra-long staple cotton are expected to register a further substantial decline during 1970/71. Although disappearance may be down slightly due to smaller anticipated mill use, 1970 production fell sharply, causing the prospective carryover to drop well below the inventory of 107,000 bales last August (table 15).

U.S. production of extra-long staple cotton is estimated at 60,000 running bales, down from 76,800 last season. A 20-percent decline in yield per acre is responsible; harvested acreage was about unchanged (table 1).

The average price received by farmers for extra-long staple cotton to December 1 was 44.6 cents per pound, about 4 cents above the year-earlier price. December's 44.7 cents was a shade above November 1970 and well above December 1969. The support price for the 1970 crop is 40.5 cents, half a cent above a year earlier. Producers are eligible for a direct price support payment of 9.29 cents a pound, slightly above last season's 8.88 cents.

CCC has sold at market prices most of the current season's 43,000 bales of extra-long staple cotton "shortfall" (quantity by which estimated requirements for domestic use and exports of American Pima cotton exceed U.S. production). Through mid-January, 38,947 bales had been sold. After the "shortfall" is sold, CCC will continue to offer its stocks for sale for unrestricted use at not less than the higher of 115 percent of the current loan rate plus reasonable carrying charges, or the market price.

For the 1971 crop of extra-long staple cotton, USDA announced a national marketing quota of 120,000 bales and a national acreage allotment of 117,791 acres, 50 percent above 1970 (table 9). The allotment is based on the acreage necessary to satisfy the quota, which is the sum of estimated domestic use and exports less imports for 1971/72. The larger quota reflects the need to

majority required of those voting in the annual referendum.

Producers indicated January intentions to plant 102,700 acres of ELS cotton in 1971 (table 13). This compares with 75,900 acres last year and reflects the increased allotment.

### Cotton Linters Supply and Use May Fall Slightly

The supply of cotton linters during 1970/71 is expected to total slightly below last season's 1¼ million bales. Moderately lower beginning stocks and slightly smaller anticipated imports may more than offset larger production. Based on the December 1 estimate of the cotton crop, production of cotton linters is expected to

total about 2 percent above last year's 1.2 million bales. August 1 stocks were down about one-fifth to the lowest level since 1951/52 (table 28).

Linters disappearance may fall moderately below the 1.3 million bales of 1969/70. During early 1970/71, both consumption and exports were sharply below year-earlier levels. Use of chemical linters was down 17 percent during August-November; felting linters consumption was down 10 percent. Smaller supplies and higher prices may have cut use. The price for grade 4 staple 4 felting linters averaged 5.38 cents per pound in December, slightly above both the previous month and December 1969.

## EXPORT MARKET OUTLOOK

### U.S. Share of World Trade May Increase

During 1970/71, world cotton exports are projected by the Foreign Agricultural Service to total near last season's 17.2 million bales. While foreign Free-World shipments are expected to decline slightly, U.S. exports may gain sharply—possibly accounting for about one-fifth of total trade, up from 17 percent in 1969/70 (table 30).

Both world cotton production and consumption are projected to remain near last year's levels of 51.7 and 53.2 million bales, respectively. A small gain is possible for cotton use with perhaps a slight decline in production. Use may increase a little in communist and foreign Free-World countries; little change is likely in the United States. Despite record-high USSR production, world cotton output may decline slightly, reflecting sharply lower foreign Free-World prospects (table 31).

### U.S. Export Prospects Improve as FFW Supplies Plummet

Recent developments in the foreign Free-World cotton situation have led to improved U.S. export prospects. Shipments probably will total at least 3½ million bales, sharply above last year's below-average 2.8 million. Low stock levels, record-high consumption prospects, and declining production in the foreign Free World point to increased demand for U.S. cotton during the remainder of 1970/71. During August-December, U.S. exports totaled 967,400 bales, 28 percent above the first 5 months of 1969/70. Shipments are expected to continue to exceed year-earlier levels during the balance of 1970/71.

*The foreign Free-World production-consumption gap is expected to widen substantially during 1970/71, according to the Foreign Agricultural Service. Consumption is estimated to increase slightly to a record-high 27.3 million bales. In contrast, production will fall below 24 million bales, down over 2 million from 1969/70 and the smallest since 1966/67. Thus, the difference between production and consumption may increase to about 3½ million bales, up almost 2½ million from last year (table 10 and figure 3).*

Smaller production is based on both reduced acreage and yields. Acreage is expected to decline about 1.7 million acres or 3 percent below the 50.7 million planted in 1969/70; yields may average about 231 pounds, 6 percent below last season. About one-fourth of the anticipated output decline may occur in Brazil where acreage is down sharply. Significantly lower production also is expected in Mexico, India, Nigeria, United Arab Republic, Greece, and Cameroon (table 31). Major factors include adverse growing conditions, unfavorable cotton prices, and tightness of credit.

# FOREIGN FREE-WORLD PRODUCTION AND CONSUMPTION OF COTTON

Figure 3

Brighter prospects for foreign Free-World cotton consumption are based primarily on increased use in net exporting countries. Expanding populations and higher incomes are contributing to slightly larger cotton use. However, increasing use of man-made fibers is continuing to limit gains in cotton consumption.

The 1970/71 outlook for foreign Free-World production is in contrast to the longer term trend. During 1955-70, production increased at an average annual rate of 716,000 bales, while consumption gained 532,000 bales a year (figure 3). Thus, the production deficit has steadily narrowed—declining almost 3 million bales over the 15-year span. However, since 1962, the upward trend in production has slowed, resulting in a relatively constant annual production-consumption gap of about 2 million bales. This apparent recent shift in the foreign Free-World production trend, if maintained, bodes well for future U.S. cotton exports.

## Funds Available for Government Export Financing

Through mid-January, funds available for financing U.S. cotton exports under special government programs (including authorizations and loans issued but not used

in previous years and those which may not be used in fiscal 1971) would cover shipments of around 1.4 million bales, compared with estimated shipments of 1.7 million in 1969/70. Currently available authorizations under P.L. 480 for financing cotton exports during 1970/71 are below last year's total, while Export-Import Bank credits issued are higher (table 29).

## Prices Remain Firm in Import Markets

Prices for most qualities of both U.S. and foreign-grown cotton, c.i.f. Liverpool, have increased during the past year and now exceed their year-earlier levels by 1/3 cent a pound in most instances. Recent price quotations for U.S.-grown cotton generally have averaged near or slightly below those of competitive growths (tables 33 and 34).

U.S. Strict Middling  $1\frac{1}{16}$  inch cotton prices averaged 30.39 cents per pound in December, slightly below the previous 2 months but almost 2 cents above the year-earlier level. In comparison with the c.i.f. Liverpool index for similar qualities, the U.S. price was about ¼ cent lower in December (table 11).

U.S. and foreign average spot export prices are shown in table 35.

## OUTLOOK FOR 71/72

### COTTON LEGISLATION

The Agricultural Act of 1970, a 3-year program covering upland cotton, wool, wheat, feed grains, and dairy, was enacted in November. USDA in December proclaimed a national average 1971-crop price-support loan rate of 19.50 cents per pound, net weight basis for upland cotton, and gave other features of the new program. Simultaneously, USDA revoked the upland cotton marketing quota and national acreage allotment proclaimed October 15, 1970, which was required by legislation in force at that time. The USDA announcement stated in part:

"The national average price-support loan rate of 19.50 cents per pound is for [basis] Middling 1-inch upland cotton (micronaire 3.5 through 4.9) on a net weight basis, average location. Application of loan rates on a "net weight" basis is a change from the previous method of basing loans on gross weight. If loans were made in 1971 on the basis of bale gross weight, as was the case in 1970 and many earlier years, the 1971 loan rate would be approximately 18.70 cents.

"The 1971 loan rate was established under provisions of the Agricultural Act of 1970 which provides for a level to reflect—for Middling 1-inch upland cotton, micronaire 3.5 through 4.9, at average location in the U.S.—90 percent of the estimated average world price for such cotton for the 2-year period ending July 31, 1970.

"A preliminary set-aside program payment rate to cooperators has been established by the 1970 act at 15.00 cents per pound. The final set-aside program payment, together with the national average market price for Middling 1-inch cotton, micronaire 3.5 through 4.9, in the designated spot markets during the August-December 1971 period must equal the higher of (1) 35.00 cents, or (2) 65 percent of parity as of the beginning of the marketing year, August 1, 1971. The payment will not be reduced if the rate as finally determined is less than the rate of the preliminary payment.

"The Agricultural Act of 1970 limits cotton payments to any person to \$55,000. This limitation does not apply to loans.

"Special provision for small farms also is provided. The payment rate will be increased by 30 percent to any producer who (1) is on a farm on which the base acreage allotment is 10 acres or less with payment production from the farm base allotment of 5,000 pounds or less, (2) resides on such farms, and (3) derives his principal income from cotton produced on such farm.

"Loans on 1971-crop upland cotton will be available to program cooperators for a term of 10 months from the first day of the month in which the loan is made upon presentation of warehouse receipts reflecting accrued storage charges of not more than 60 days. In prior years, the loan maturity date was July 31 following the year in which the cotton was produced.

"Also announced, as required by the new law, is the national production goal of 11,993,500 bales (standard bales of 480 pounds, net weight) and a national base acreage allotment of 11,500,000 acres for the 1971 crop of upland cotton (table 12). The national production goal is the sum of the estimated domestic consumption and estimated exports for the 1971/72 marketing year which begins August 1, 1971, plus an allowance of five percent of the estimated domestic consumption and exports for market expansion, plus an adjustment necessary to provide carryover stocks in the United States on July 31, 1972, equal to 50 percent of the average offtake for the 3 preceding marketing years.

"To be eligible for loans and payments, cotton producers must set aside and devote to conserving uses an acreage of cropland not to exceed 20 percent of the farm base acreage allotment, plus the conserving base established for the farm. The decision on the actual percentage to be set aside will be made prior to the program signup period. Unlike previous programs, the farm allotment will not limit the acreage of cotton a participant can plant. A cotton farmer who sets aside the required acreage to conserving uses can plant all of the cotton he wishes—without penalty—and still receive the full payment on the farm base acreage allotment.

"Failure to plant at least 90 percent of the farm's base acreage allotment will result in a reduction in payments [unless such failure resulted from natural disaster or payment limitations]. It could also result in a reduction in the 1972 allotment of as much as 20 percent. If no cotton is planted for three consecutive years, the entire allotment can

be lost. All allotments removed from farms will be reallocated to other cotton farms.

"Release and reapportionment and sale and lease of allotments are continued under the new program. The December 31 deadline for filing applications for sale and lease of allotments is eliminated so producers will have ample time to complete these transactions.

"The same skip-row planting rules which were in effect for the 1970 crop will be applicable to the 1971 crop except that skips of two or more rows will be eligible for designation as set-aside acreage. Under past programs, skips had to be at least four rows wide in order to be eligible for designation as diverted acres. As under past programs, skips of one or more rows will count toward meeting the conserving base requirement for the farm."

## PLANTING INTENTIONS

Cotton producers have indicated January intentions to plant about 11.8 million acres of upland cotton in 1971. This compares with 1970 plantings of 11.9 million acres and the 1966-70 average of 10.8 million planted under the auspices of the Agricultural Act of 1965. Slightly smaller planting intentions this year reflect declines in the Southeast, Delta, and West; intentions are slightly higher in the Southwest (table 13). However, farmers are expected to plant above their respective 1971 base acreage allotments in all areas except the Southeast.

When the planting intentions survey was conducted, farmers did not have complete information on the new cotton program provisions. Final program provisions are expected to be announced in early February. Any changes in farmers' intentions will be reflected in the regular spring planting intentions report to be released March 16.

Table 12.—Cotton, upland: Acreage allotments, by regions and each region as a percentage of total, 1959 to 1971

## MAN-MADE FIBER CAPACITY

Man-made fiber output may not increase as sharply in 1971 and 1972 as in recent years. Although U.S. capacity to produce man-made fibers still is expected to increase substantially during the next 2 years, lagging general economic activity, increasing textile imports, and competition from other fibers have forced some cutbacks in expansion plans. The Textile Economics Bureau, a private trade organization, projects that producing capacity will reach 8.5 billion pounds in November 1972, an increase of about 18 percent over November 1970 (table 14). The organization estimated a year ago that this level would be reached by November 1971. Thus, production plans have been curtailed.

Most of the growth in man-made fiber producing capacity will be realized by non-cellulosic fibers, for which capacity is expected to increase about one-fourth during the next 2 years. Rayon and acetate capacity may remain near the November 1970 level, while textile glass capacity is projected to increase about 13 percent.

For man-made staple fibers, some of which compete directly with cotton, planned increases in capacity during 1971 and 1972 are mixed. For instance, rayon and acetate staple capacity may expand about 5 percent in contrast to a decline in yarn capacity. On the other hand, non-cellulosic staple capacity is expected to increase about one-fifth, a little below that anticipated

for yarn capacity. Although the capacity to produce polyester staple, the principal non-cellulosic fiber, may expand about one-fourth, this is only about half the rate of recent years.

<sup>1</sup> Current crop less ginnings prior to August 1 beginning of season. <sup>2</sup> Ginnings prior to August 1 end of season. <sup>3</sup> Adjusted to cotton marketing year basis, August 1-July 31. <sup>4</sup> Running bales except "net imports" which are in bales of 500 pounds, gross weight. <sup>5</sup> Does not include picker laps reported as raw cotton by the Bureau of the Census. <sup>6</sup> Imports for consumption beginning 1963. <sup>7</sup> Includes American-Egyptian, Sea Island, and foreign-grown cotton. In some years prior to 1962, small amounts of foreign-grown long-staple upland cotton are included. <sup>8</sup> Foreign stockpile cotton included by the Bureau of the Census as of August 1 was 7,168 bales in 1962, 61,168 in

1963, 27,474 in 1964, 18,307 in 1965, 12,500 in 1966, and 884 in 1967. In bond cotton is not included: 116,609 bales as of August 1 in 1963, 60,297 in 1964, 38,022 in 1965, and 33,284 in 1966. <sup>9</sup> Preliminary and estimated. <sup>10</sup> Crop Reporting Board report of December 8, 1970. <sup>11</sup> Imports exceed quota of 85,600 bales, in part, because import data are not adjusted to August 1-July 31 marketing year. Also, may include 6,000 or more bales of cotton stapling less than 1-3/8 inches.

Bureau of the Census.

# INDEX TO 1970 ISSUES OF COTTON SITUATION

<i>Item</i>	<i>Issue</i>
Acreage:	
Harvested—	
In foreign countries	January, March, October
U.S., by region and by State	January, March, May, August, October
Planted, U.S., by region	January, March, May, August, October
U.S. by State	January, March, August
Skip-row patterns	October
Carryover:	
By type	January, March, May, August, October
Communist areas	October
Foreign Free World	January, March, May, August, October
Commodity Credit Corporation Inventory:	
By staple length — upland	January, March, October
Owned and under loan	January, March, May, August, October
Consumption of cotton:	
Communist areas	October
Foreign Free World	January, March, May, August, October
United States	
All kinds, by month	January, March, May, August, October
American upland, by staple, by month	January, March, October
Calendar year, mill and domestic	January, March, October
Daily rate	January, March, May, August, October
Mill, by type	January, March, May, August, October
Per capita	January, March, October
Upland, monthly totals	January, March, October
Cotton program	January, March
Cottonseed and products	May
ELS cotton situation	March
Exports:	
By country of destination from the United States	January, March, May, August, October
By months, total and cumulative	January, March, May, August, October
Government financed	January, March, May, August, October
Textiles (raw cotton equivalent)	January, March, May, August, October
Total lint, by type	January, March, May, August, October
Ginnings:	
By staple length	January, March, October
By States	March
Imports:	
By months, total and cumulative	January, March, May, August, October
Textile (raw cotton equivalent)	January, March, May, August, October
Total lint, by type	January, March, May, August, October
Linters:	
Prices	August
Supply and distribution	January, August, October
Loan differentials	May
Loan rates	January, March, May, August, October
Man-made fibers:	
Consumption—	
Daily rate, on cotton system	January, March, May, August, October
Domestic	January, March
Domestic, cotton equivalent	March
Mill, total and per capita	January, March, October
Staple fibers, cotton equivalent, monthly, on cotton system	January, March

# INDEX TO 1970 ISSUES OF COTTON SITUATION—continued

<i>Item</i>	<i>Issue</i>
Man-made fibers:	
Consumption—continued	
Prices—f.o.b. producing plants	January, March, May, August, October
Producing capacity	January
Textiles, exports and imports	January, March, May, August, October
World production—actual and cotton equivalent	August
Methods of harvesting cotton	August
Military demand for cotton	January, March, May, August, October
Mill margins and fiber prices	
Blended fabrics	January, March, May, August
Cotton cloth	January, March, May, August, October
Prices, cotton:	
Domestic—	
American-Egyptian	May, October
Gray goods and blends	January, March, May, August
Landed group B mill points—SM 1-1/16"	January, March
Parity percentage	May
Parity price	January, March, May, August, October
Premiums and discounts	May
Received by farmers	January, March, May, August, October
Spot—by specified qualities	January, March, May, August, October
Foreign—c.i.f. and spot	January, March, May, August, October
Production of cotton:	
American Pima (formerly American-Egyptian)	January, March, May, August, October
In foreign countries	January, March, October
Lint, all kinds	January, March, May, August, October
Percent sold, by State	May
Ratio of stocks to unfilled orders	January, March, May, August, October
Skip-row planting	October
Situation at a Glance	January, March, May, August, October
Special articles:	
The Cotton Fiber-Textile-Apparel Complex	May
Yield and Acreage Implications for U.S. Cotton	August
Stocks of cotton, beginning of season:	
All kinds, privately owned and CCC	August
By type	January, March, May, August, October
CCC, weekly data	January, March, May, August, October
In foreign countries	January, March, May, August, October
Supply and distribution of cotton:	
All kinds, by type	January, March, May, August, October
By staple length, upland	January, March, October
Communist areas	October
Foreign Free World	January, March, May, August, October
Textiles:	
Exports (cotton equivalent)	January, March, May, August, October
Deliveries to Military Forces	January, March, May, August, October
Imports (cotton equivalent)	January, March, May, August, October
Value of production: Cotton lint and seed	May
Yields:	
Per harvested acre—	
By region, actual and trend, and by State	January, March, May, August, October
In foreign countries	January, March, October
Per planted acre—by State and U.S.	January, March, May

# TABLES

## COTTON

### Acreage

#### Allotments, United States

Extra-long staple, by State, 1967 to date .....	9	10
Upland, by region, 1959 to date .....	12	14
Harvested, by country and world, averaged 1964-68, 1969 and 1970 .....	31	31
Harvested and planted, U.S. by region, 1960-70 .....	16	17
Harvested, by State and United States, average 1964-68, 1969 and 1970 .....	1	6
Planted, by State and United States average 1964-68, 1970, and 1971 .....	13	15

### Consumption, United States

Annual totals, adjusted by marketing year, by type, 1955 to date .....	15	16
Daily rate, upland, unadjusted and seasonally adjusted, August 1969 to date .....	4	8
Mill, per capita, and total, calendar years, 1958 to date .....	7	10
Mill, American Upland, by staple length, May 1967 and August 1968 to date .....	20	21
Mill, upland, monthly totals, August 1968 to date .....	6	9

### Exports

Annual totals, by type, United States, 1955 to date .....	15	16
World, by country of origin, 1957 to date .....	30	30
U.S., by country of destination, by staple length, October and November 1970, and cumulative August-November 1970 .....	32	32
Government financed, United States, fiscal years, 1968 to date .....	29	29
Textile manufactures, raw cotton equivalent, U.S. 1965 to date .....	22	23

### Imports into the United States

Annual totals, by type, 1955 to date .....	15	16
Textile manufactures, raw cotton equivalent, 1965 to date .....	21	22

### Linters, supply and distribution, United States, 1950 to date ..... 28 | 29 |

### Loan rates, average of the crop and spot market by staple, U.S. 1967-70 ..... 19 | 20 |

### Military deliveries of textiles, United States, August 1969 to date

All fabrics, by major raw fiber content, in pounds .....	25	26
Cotton and man-made fiber fabrics, in equivalent square yards .....	26	27
Wool and fiber mixture fabrics, in equivalent square yards .....	27	28

### Prices, monthly and annual averages

By staple length at spot markets, U. S., August 1967 to date .....	19	20
C.i.f. selected growths and qualities		
Bremen, Germany, 1967 to date .....	34	33
Liverpool, England, 1967 to date .....	33	33
Cloth values, raw fiber prices and mill margins, carded yarn goods, U.S., August 1969 to date .....	8	10
Foreign spot market prices and equivalent U.S. spot export prices, October, November, and December 1970 .....	35	34
Received by farmers for upland cotton, United States, August 1967 to date .....	19	20
Selected growths and qualities, average index price and U.S. price SM 1-1/16", Liverpool, England, January 1968 to date .....	11	13

### Production

Annual totals, by type, United States, 1955 to date .....	15	16
By country and world, average 1964-68, 1969 and 1970 .....	31	31
By region, United States, 1960 to date .....	16	17
By State and United States, average 1964-68, 1969 and 1970 .....	1	6
Ginnings, upland cotton, by staple length, United States, through November 30, crops of 1969 and 1970 .....	2	6

### Ratio of stocks to unfilled orders, cotton broadwoven goods, January 1966 to date ..... 5 | 8 |

### Stocks, United States

By type, beginning of season, 1955 to date .....	15	16
CCC weekly totals, upland and extra-long staple, August 1, 1969-July 31, 1970 .....	18	19
CCC weekly totals, upland and extra-long staple, August 1, 1970 to date .....	3	7

	<i>Table</i>	<i>Page</i>
Supply and distribution		
American upland, by staple length, 1961 to date .....	17	18
Foreign Free World, 1959 to date .....	10	11
United States, by type, 1955 to date .....	15	16
Yield per harvested acre		
By country and world, averages 1964-68, 1969 and 1970 .....	31	31
By region, U.S., actual and trend, 1960 to date .....	16	17
By State, 1964-68 average, 1969 and 1970 .....	1	6
MAN-MADE FIBERS		
Consumption, United States		
Daily rate, on cotton system, unadjusted and seasonally adjusted,		
August 1969 to date .....	4	8
Monthly totals, on cotton system, staple fibers, in cotton equivalent bales,		
August 1968 to date .....	6	9
Producing capacity, United States, yarn and staple fibers,		
November 1970 and 1972 .....	14	15
Textile manufactures, raw fiber equivalent		
Exports, 1965 to date .....	24	25
Imports, 1965 to date .....	23	24
